ORD - 1981-02-05
IC - C10L1/18
FS - CPI
DC - E17 H06
AB - J56011990 A compsn. consisting of isopropyl alcohol
and/or normal propyl alcohol is added to fuel of IC
engine in amt. of 2-400 ppm.
- Fuel consumption of IC engine is economised.
Atmospheric pollution due to exhaust gas and poisoning
of catalyser of exhaust gas converter do not occur, and
contains no heavy metals.
- In an example, portable electric generator was driven
by gasoline engine using a gasoline contg. 5 ppm of
(i-propyl alcohol/n-propyl alcohol, 9:1 mixt).
Generated electricity (watt- hour) was increased by 17%
compared with the case of pure gasoline.
